

# Front end development: Basics

## JavaScript – more on data types

---

The following exercise contains the following subjects:

- ◆ data types

### Instructions

1. Create a variable that's value holds a string.
2. Create a variable that its value holds a number.
3. Create a variable that its value holds an object.
4. Create a variable that its value holds a boolean.
5. Create a variable that its value holds null.
5. Create a variable that its value is undefined.
6. Create a variable that its value holds a symbol.

Console log the types of your variables.
