

Front end development: Arrays

JavaScript – Length of strings

The following exercise contains the following subjects:

- ◆ Array

Instructions

Write a function that will receive an array of strings and will return a new array containing all the lengths of all the strings in the array it got as a parameter.

So that if you call this function with this array for example:

```
["boo", "doooo", "hoo","ro"]
```

it will return this array: [3, 5, 3, 2].

Submit the file to Hive.
