

Website Building: REACT

React – Default props

The following exercise contains the following subjects:

- ◆ default props

Instructions

In your app component create 4 MusicAlbum components.

Pass to your MusicAlbum component the following props:

1. Album Title
2. Artist Name
3. Number of songs
4. Length
5. A link to one of the songs in the Album

Display them in a simple way in JSX.

You should have one MusicAlbum for a Hebrew album (pass all props to it)

You should have one MusicAlbum for an English album (pass all props to it)

You should have one MusicAlbum for a random album (do not pass artist name and length into props)

You should have one MusicAlbum for a default album (do not pass any props to it).

Set default props in case we don't pass any props or missing props to the MusicAlbum component
