Loops

JavaScript – compare the arrays

The following exercise contains the following subjects:

- ◆ for loop

Instructions

You are given two arrays:

```
const food = ["Noodle", "Pasta", "Ice-cream", "Meat",  
"Cucumber", "Olives"];  
const food1 = ["Fries", "Ice-cream", "Pizza", "Olives",  
"Hamburgers"];
```

Create a function that takes these two arrays as arguments.

Compare these two arrays using 2 for loops and return the items that are the same. If none are the same return false.
