

Backend: MongoDB

Node JS – Blog Data

The following exercise contains the following subjects:

- ◆ MongoDB

Instructions

Now that we have our schema setup lets start to code!

1. Create and connect to your mongo server
2. Create at least two users.
 - avoid creating user duplicates by for example having unique emails for the users in the database.
3. Create at least two posts
4. Create at least 1 comment on a post.

Extra

Create validation for your collections.
