

Front end development: Basics

JavaScript – Password Validation

The following exercise contains the following subjects:

- ◆ Ternaries
- ◆ Logical operators

Instructions

Create a simple password validation function that takes a password string as an argument.

If the passwords length is more than 7 characters return “Strong”. If it is less than 7 characters long return “Weak”.

- 1) Create a function that uses a if/else conditional expression.
2. Create a function that uses a ternary conditional expression.
3. Create a function that uses a && logical operator.
4. Create an “advanced” password validation function that takes a password string as an argument.
If the password length is more than 7 characters long and has at least one capital letter return “Very Strong”.

If the password length is only 7 characters long return "Strong".

If the password length is less than 7 characters long return "Weak"

Use only a ternary conditional expression.
