Front end development: Basics

JavaScript – functions

The following exercise contains the following subjects:

- ◆ functions

Instructions

1. Write a function called 'describeCountry' which takes three parameters:

'country', 'population' and 'capitalCity'. Based on this input, the

function returns a string with this format: 'Finland has 6 million people and its capital city is Helsinki'

2. Call this function 3 times, with input data for 3 different countries. Store the returned values in 3 different variables, and log them to the console.
