Website Building: Carousel

React – build your own carousel

The following exercise contains the following subjects:

◆ Carousel

Instructions

Lets build our own carousel.

The data

1. Create an array of objects.

2. Each object should have an id and an img url, header, sub-header.

The functionality

1. Your carousel should able to slide infinitely. Meaning when the last image is presented it will go to the first one on the next slide.

1. User is able to navigate to the next image and the previous image with the help of buttons
 ">" for next.

"<" for previous.

2. User can see how many slides there are with a "circle" underneath the carousel slide and able to click them to go to the specific image.

3. Carousel automatically slides to the next image after x amount of time.

4. When sliding to the next image make it look nice with animations.

Example:

First slide label

Nulla vitae elit libero, a pharetra augue mollis interdum.
