React: Hooks

React – Editing

The following exercise contains the following subjects:

- ◆ useState
- ◆ useEffect
- ◆ useRef

Instructions

Lets create a very simple editing app.

Create a button that displays the text "edit".

When the user clicks on the button an input text appears which is automatically focused.

The buttons text is now called "save".

When the user clicks on this button again, the input disappears and the buttons text is again called "edit"

mockup:

after user clicks on edit
