React: Redux

React – chuck norris

The following exercise contains the following subjects:

◆ Redux

Instructions

1. Create a create react app and implement the boiler plate for redux with the redux dev tools.

2. We will do a simple app that will fetch a random Chuck Norris joke from [this api](#) in your App.js.

3. Create a Joke component that will fetch the joke that is stored in your redux store and display it in your JSX.

Tip:

I highly recommend you write comments throughout this exercise, explaining what each line of code does and how it fits in redux. You can always refer back to this exercise with your comments to get a refresh on how redux works.
