React: Hooks

React – Image Toggle

The following exercise contains the following subjects:

◆ useRef

Instructions

Lets toggle at least 2 images from a black and white image to a color image when hovering over them with the help of useRef and specific event listeners.

Todos:

1. Find 2 color images.

2. Convert those color images to a black and white image. (there are many online web apps that do this).

3. Find out the event listeners for hovering over and hovering out of an element.

4. When hovering over the image you should display the colored image.

5. When you are hovered out of the image you should display the black and white image

Now do your magic :)

Here is a quick [demo](#)
